

TITLE Add notification under the email input field if email will have wrong format and doesn't speak "thanks".

WHY?

Name: Notification for incorrect email input in newsletter subscription field.

Description: As a user, I want to receive a notification when I enter an incorrect email in the newsletter subscription field. Currently, when I input an invalid email format, no notification appears, and I am unaware of my mistake. I expect the system to inform me about the incorrect input and help me rectify the error.

Criteria:

1. When an incorrect email format is entered (e.g., missing "@" symbol or incorrect domain format), the system should display an error notification.
2. The notification should be clear and understandable, indicating the reason for the error and providing possible solutions.
3. The notification should be prominently visible and clearly displayed within the email input field, allowing the user to notice the error promptly.
4. After correcting the error, the notification should disappear or automatically hide to avoid hindering the user's further interaction with the form.

TODO

Implement the function of email input error.

Context: This function should trigger on incorrect data entry.

Additional details: The notification should appear under the email line.

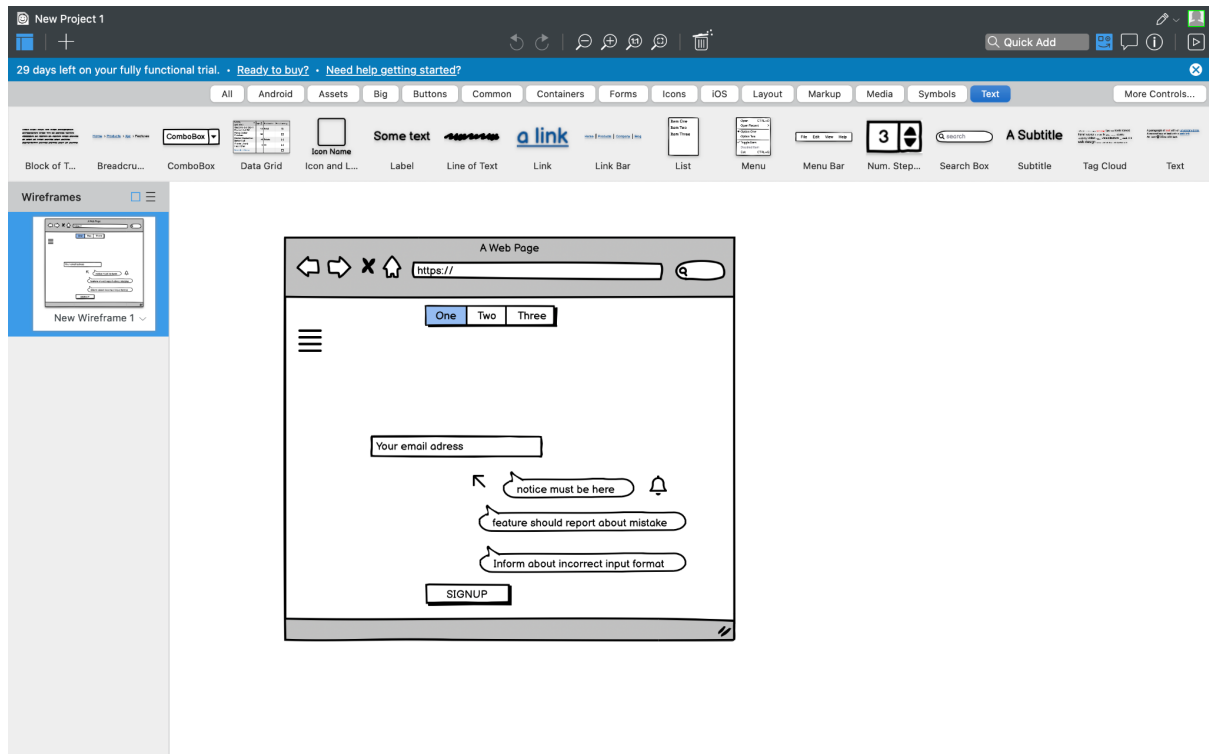

Priority: Medium

Deadline: 30th September 2023

CONTENT

1. Email is invalid.
2. Please enter a valid email address.
3. Enter a valid e-mail address.
4. Required field.

HOW TO TEST

Name: Error notifications when entering incorrect email in the newsletter field.

Description: Checking the functionality of the error notification when the email is entered incorrectly in the newsletter field.

Preconditions: The web page with the newsletter subscription box is available and open.

- Steps:**
1. Open page, containing the subscription field on the newsletter.
 2. Input an incorrect format in the field email, for instance, "username111.gmail.com"
 3. Input an incorrect format in the field email, for instance, "username111@gmail."
 4. Leave the field for email entries empty.
 5. Press the button Enter and go to the next field.
 6. Check if the error notification appears.

Postconditions: An error notification is displayed and prompts the user to correct the entered email.
